The VVSS Labs in 2021 will follow some of the guidelines, principles of agile testing. We will include **Sprint planning meetings** and **Sprint retrospectives** in the agenda of the labs.

The proposed timeline for the labs is detailed below:

Duration	Activity	Details
5 minutes	Reading of the presence list	Each student will announce if they are present.
10-15 minutes	**Sprint planning meeting**	We will discuss the in-lab assignment that needs to be presented before the end of the current lab; and review the associated homework that needs to be uploaded in the next two weeks. This corresponds to planning a new sprint consisting of 2 weeks.
10-15 minutes	**Sprint retrospectives**	Starting from the second lab each group of students will shortly present what they have achieved in the last two weeks and raise questions, discuss issues if any.
30 minutes	Solving the in-lab assignment	Each team will work individually on the in-lab assignment.
40-50 minutes	Presentation of in-lab assignments and homework	Each team will present the in-lab assignment and the homework. There will be an in-lab assignment at each lab, homework needs to be presented starting from the second lab.

Disclaimer notes:

* The proposed timelines are subject to change, they might be slightly modified based on the task of the current lab. We will also include breaks.

* The presentation of the in-lab and homework assignment will happen based on the announcement of the student groups, as soon as the group is ready to present, they will post their names on the Teams channel, and message the lab teacher in their group of two plus the lab teacher. (If you create a direct message with the teacher and post a message there too, it will help the lab teacher to call the groups faster, without needing to look up student names, etc. But posting on the common channel is also required, this will define the order of the presentations.)
